

Atlanta Clinical & Translational Science Institute

Community · Discovery · Training

The **Atlanta Clinical & Translational Science Institute** (ACTSI) is focused on accelerating the translation of laboratory discoveries into healthcare innovations for patients by supporting **Emory University, Morehouse School of Medicine** (MSM), and the **Georgia Institute of Technology** (GA Tech) investigators. The resources include:

Discovery

- **Pilot and Collaborative Translational and Clinical Studies; 68 Grants Awarded**
- **26 metro-Atlanta Clinical Interaction Sites**

Training

- **Research Education, Training and Career Development, including a Master of Science in Clinical Research, KL2, and TL1 Programs**

Expertise, Problem Solving and Support in:

- **Ethics**
- **Regulatory Knowledge**
- **Biostatistics**
- **Epidemiology**
- **Research Design**
- **Biomedical Informatics**
- **Pediatric Research**
- **Clinical Trials**
- **Translational Technologies**
- **Community Engagement**

For more information, please visit www.ACTSI.org.

ACTSI partners, led by Emory, MSM, and GA Tech, have unveiled a variety of programs aimed at liberating the intellectual and creative talents of clinical and translational researchers by providing *regulatory support, clinical research coordinators, technology transfer assistance, and project management*. ACTSI resources offer *funding for start-up research projects, better access to analytical tools, education, and training* to clinical and translational investigators. To strengthen and accelerate the process of bringing scientific discoveries to the community, the ACTSI strives to remove roadblocks and ease challenges in clinical and translational research.

The ACTSI is one of 55 medical research institutions working as a national consortium to improve the way biomedical research is conducted across the country. The consortium, funded through the Clinical and Translational Science Awards (CTSA), shares a common vision to reduce the time it takes for laboratory discoveries to become treatments for patients, and to engage communities in clinical research efforts. It is also fulfilling the critical need to train the next generation of clinical researchers. The CTSA initiative is led by the National Center for Research Resources at the National Institutes of Health.
